

## The drive sharing app that revolutionizes the concept of mobility

Volvero is a drive sharing app, where private and institutional owners can share their vehicles with the drivers. With Volvero one can have a vehicle in a most efficient and sustainable way, solving main mobility problems: traffic congestion, pollution, and access to transportation.

Volvero creates a reality in which moving and travelling are not solely done by owning a vehicle or using public transportation, but by creating a system in which one can have a vehicle, when one needs it for the time they need it. This is an approach that we have already seen successfully applied to accommodation, food, carpooling, etc.

**Volvero is fewer vehicles for everybody.**

With Volvero one can have a car, a motorcycle, or a commercial vehicle in a most efficient and sustainable way saving time and money. By registering on the platform owners can set the sharing time, distance, price, and other terms, being able to accept any drivers' request. At the same time, drivers are able to choose any vehicle and terms of sharing that best suit their needs. With the help of AI and advanced technologies, Volvero guarantees maximum security and transparency providing necessary information such as the performance of owners, drivers, and vehicles. Overcoming outdated paperwork, Volvero creates smart contracts at the start of the ride while one of a kind built-in insurance covers drivers and all kinds of vehicles.

Provides

Reduces

Access to mobility  
Security on the roads  
Full coverage insurance  
Partnership program rewards
